Layout Instruction

ENS-D10 Series

DISCLAIMER

While every precaution has been taken in the preparation of this document, Envision Energy Co., Ltd (hereinafter refers to as “Envision Energy”) assumes no liability with respect to the operation or use of Envision Energy products and documentation described herein.

Envision Energy shall not be liable for any act or omission concerning the products or documentation, interruption of service, loss or interruption of business, loss of anticipatory profits, or punitive, incidental, or consequential damages in connection with the furnishing, performance, or any use of Envision Energy products or documentations provided herein.

Please use the latest version of the applicable specifications. Figures of this documentation do not necessarily reflect the exact scope of supply. The actual scope of supply is subject to technical alterations at any time.

CONTENTS

1. LAYOUT CONSIDERATIONS

According to the recommended layout rules, Envision provides suggested values based on the configuration within key product distances.

1.1. 4-Hour BESS System

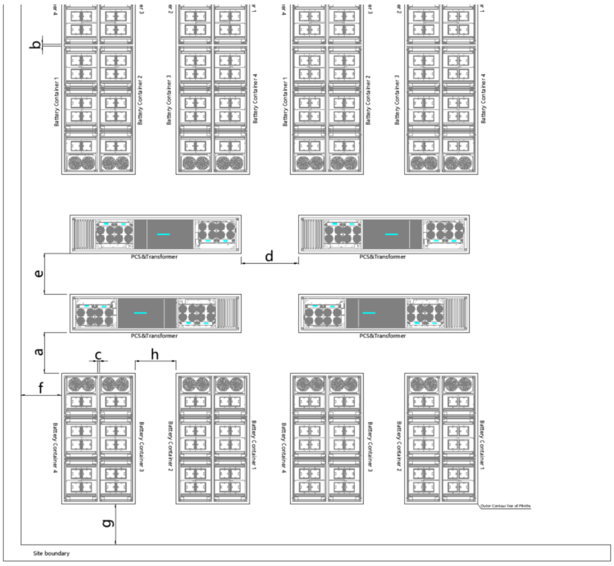

Figure 1 Layout considerations for Envision's DC container product for a 4-hour BESS system

1.2. Recommended Distance

Table 1: Distance requirements for Envision's DC Container BESS system.

	Recommended Distance (m)	Minimum Distance for O&M (m)	Comments
a	3	2.5	To accommodate opening of PCS doors & DC container doors.
b	0.15	0.15	" * For high seismic activity sites, 'b' may increase to 600mm to account for welding activity and depending on local safety regul ation"
c	0.15	0.15	" * For high seismic activity sites, 'c' may increase to 600mm to account for welding activity and depending on local safety regul ation"
d	4	3.5	PCS maintenance access (doors)
e	3.5	3	PCS maintenance access, replacement access for transformer and PCS
f	3.5	3	Forklift access
g	3.5	3	O&M inspection access
h	3.5	3.5	To accommodate opening of DC container doors and later

**Note: The values above is subject to change upon further investigation of IEC clearance distance.*

Recommended and minimum distances reflect only the needs of Envision or a third party to access and maintain the equipment in a safe and efficient manner. Attention: They do not reflect any local regulatory requirements, planning requirements, fire codes, insurance requirements, etc.

Additional considerations to distances (g, f) need to be given in case of a solid site boundary to ensure sufficient ventilation (for example in the case of an acoustic fence).

Distance requirements to site boundary (distances f, g) given in Table 1 are highly dependent on local regulation as well.

- Additional considerations:

Envision requires additional space to house SCADA / EMS servers and operational spare parts at site. These can be housed separately in a 30 ft. container or similar or more commonly together with BoP equipment, for example the servers for SCADA / EMS can be housed in the control room for the site and the spare parts in a humidity-controlled room together with spare parts for the overall site (no temperature control needed). Exact number of servers and volume of operational spare parts is project specific.
