

**Solving challenges
for humanity's sustainable future**

The World's Leading Net Zero Technology Partner for Enterprises, Governments and Organizations

With the mission of “solving challenges for humanity’s sustainable future”, Envision Energy is committed to becoming a net zero technology partner for global enterprises, governments, and institutions.

Encompassing three major business sectors - Smart Wind Turbines, Energy Storage, and Green Hydrogen Solutions, Envision Energy constructs comprehensive solutions for energy transition.

The company also manages Envision-Hongshan Carbon-Neutral Fund and owns Envision Racing Formula E team, which conquered the Formula E Teams’ Championship in 2023.

	With its contribution to the global green energy transition, Envision was listed as a “Green Giant” in TIME’s “2024 Time 100 Most Influential Companies” list.
	Envision was recognized as a leader on FORTUNE’s “Change the World” top 50 companies list in 2024 and 2021.
	Envision was honored with top recognition at the Reuters Global Sustainability Awards 2025, winning the “AI for Sustainability Excellence” category for its pioneering application of AI in driving the global energy transition.
	Envision was named both a Tier 1 Wind Turbine Supplier and a Tier 1 Battery Energy Storage System Supplier on S&P Global Commodity Insights’ inaugural 2025 Tier 1 Cleantech Companies list.
	Envision was named to MIT Technology Review’s “2025 Climate Tech Companies to Watch” list for its pioneering work in smart wind technology, net zero industrial park model and integrated digital energy systems.
	In 2025, Envision received the prestigious EcoVadis Gold Medal for its outstanding sustainability performance, ranking in the top 5% globally and the top 2% within its industry.

Envision Net Zero Action Report 2025

2.35 billion tons

As of late 2024, Envision products are expected to avoid 2.35 billion tons of global CO₂ emissions.

1005_{GW}

Our AIoT platform EnOS manages over 1005GW of energy assets worldwide, equivalent to roughly a quarter of global grid-connected wind and solar capacity.

100_{GW}

Envision has installed over 100 GW of wind turbines to date. In 2025, the company ranked first globally in new wind turbine orders, and we have accounted for 60% of all Chinese overseas turbine sales four years running.

320,000 tons

Envision has officially commissioned the world's largest and most advanced green hydrogen and ammonia production facility in Chifeng—delivering 320,000 tons of green ammonia annually.

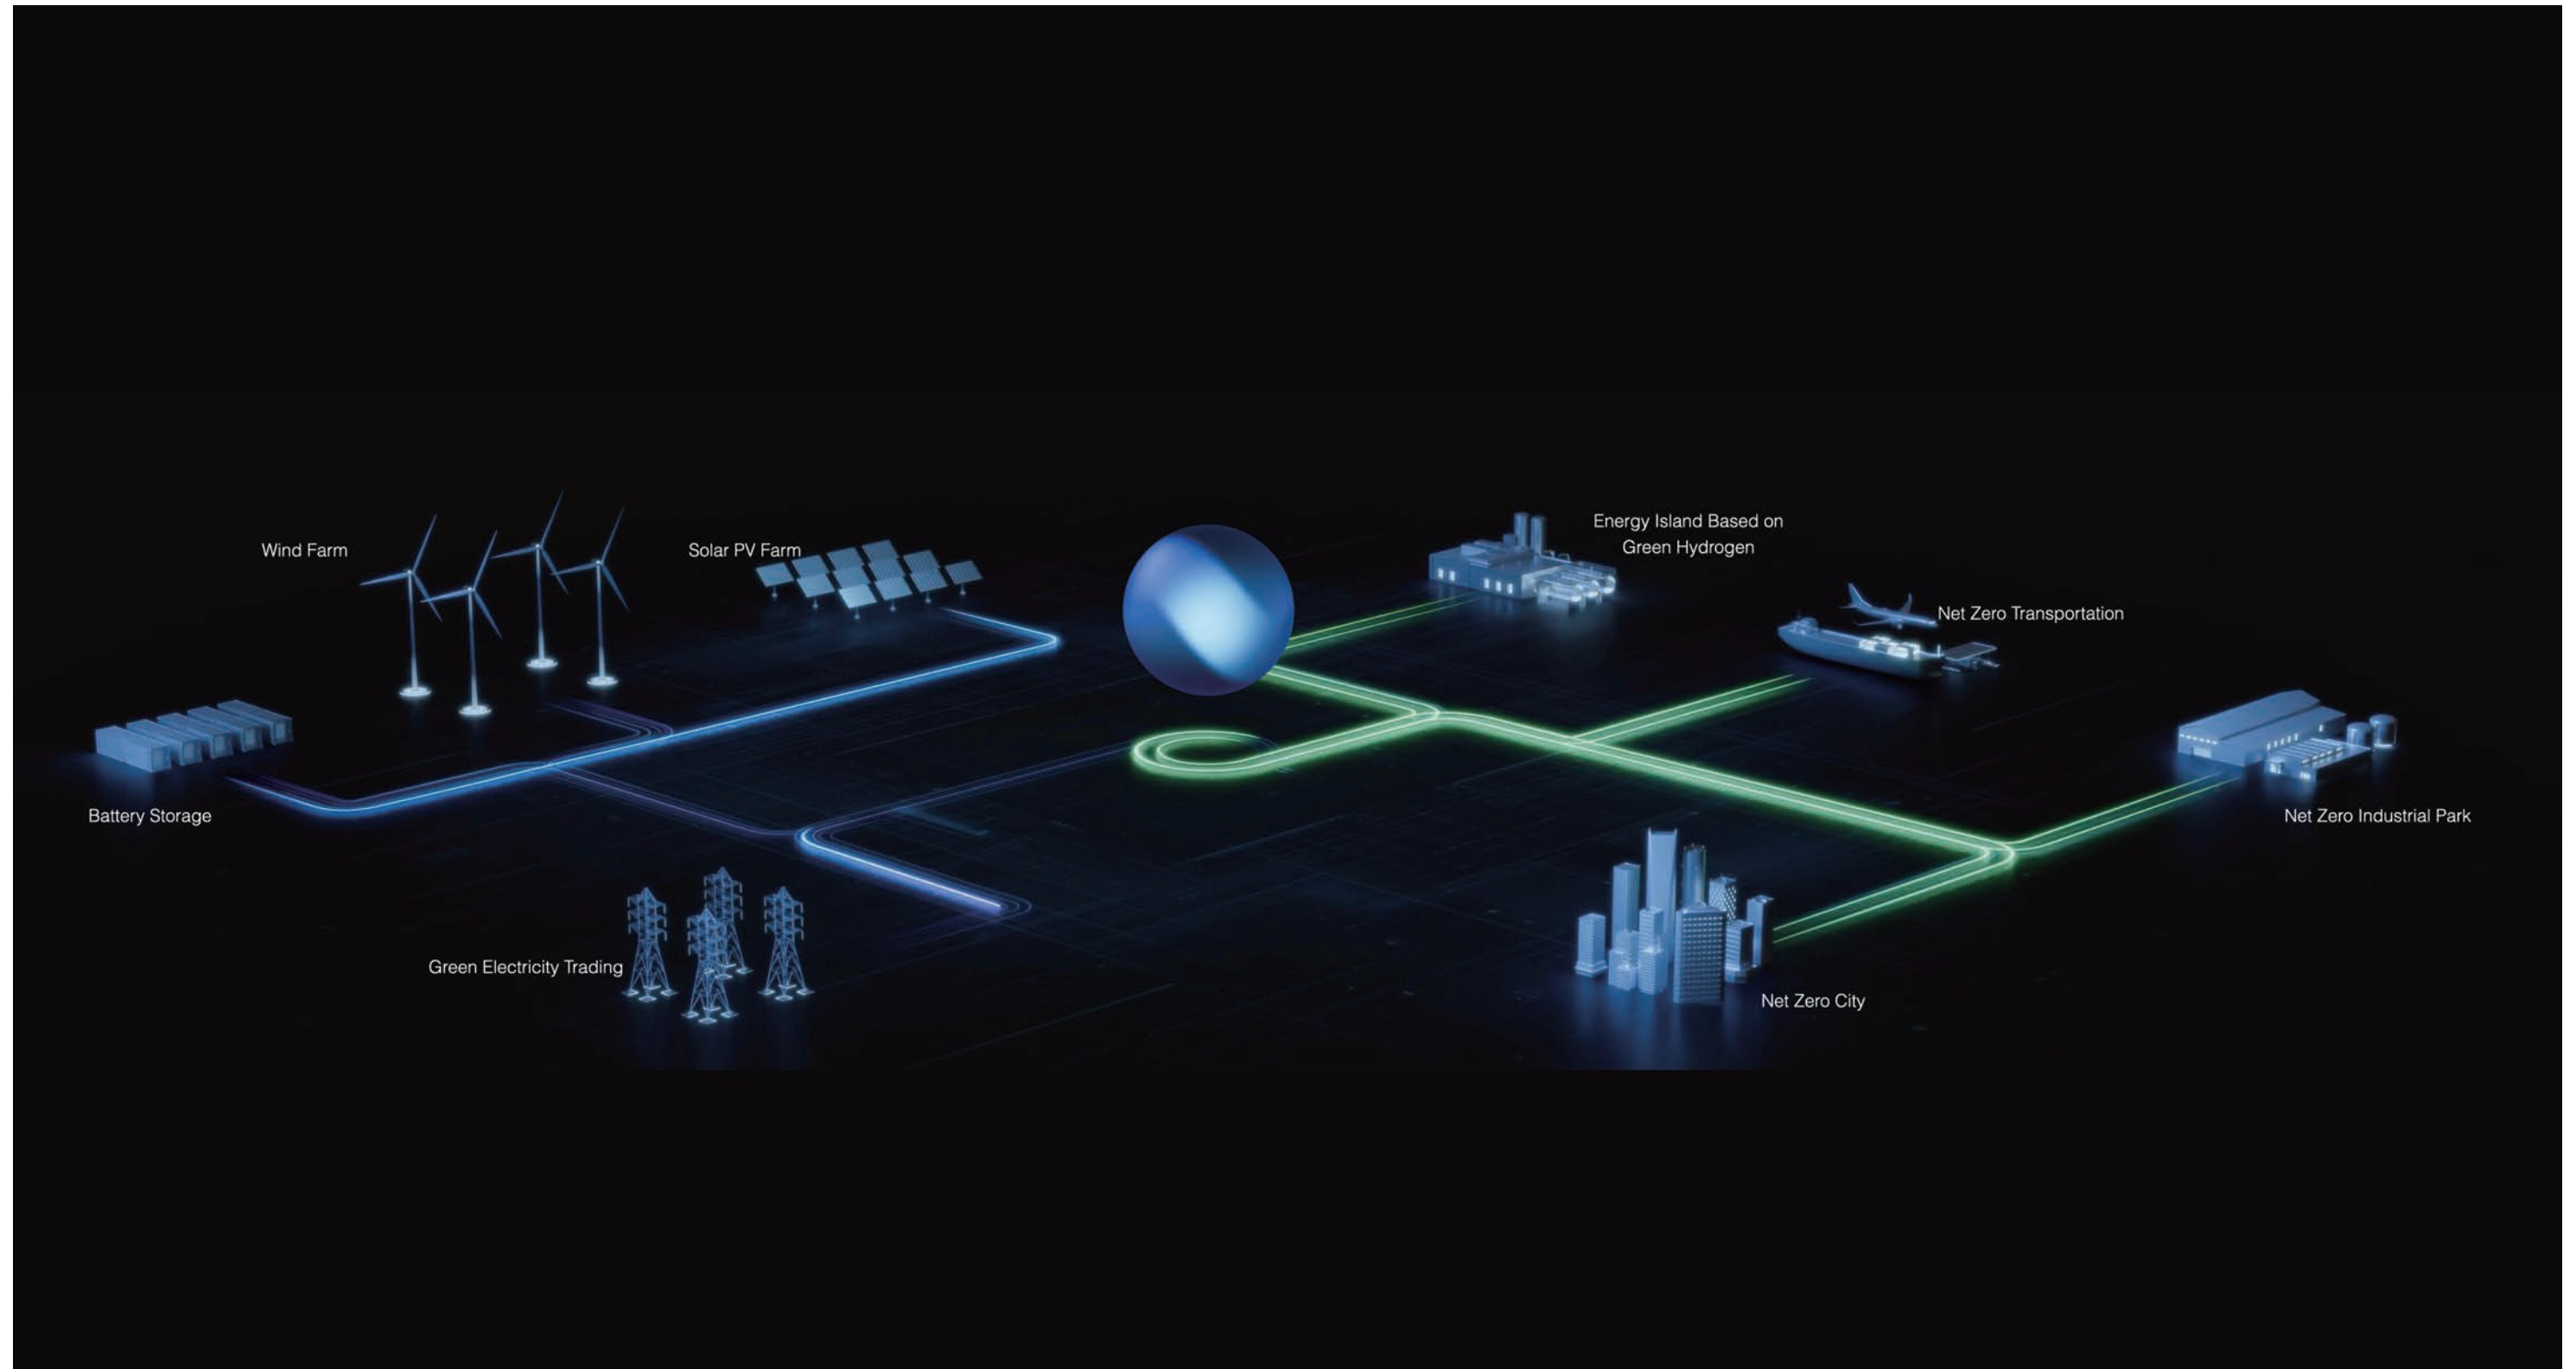

30_{GWh}

Envision Energy Storage has now delivered over 30GWh of orders to more than 300 projects worldwide, secured over 50GWh in orders.

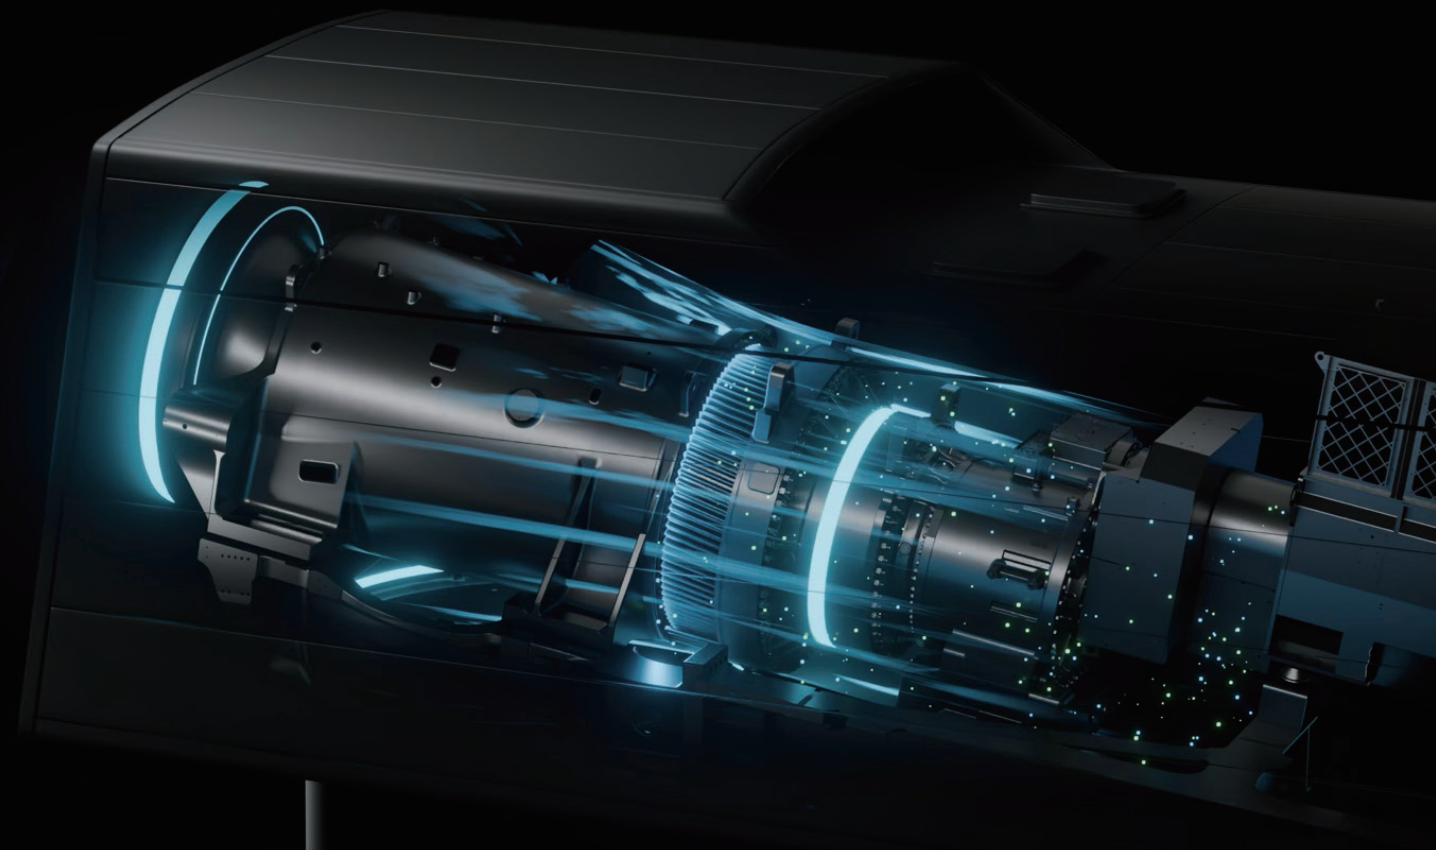

100%

Envision powered 100% of our operations with renewable electricity in 2024.

Weather Foundation Model + Energy Foundation Model Shaping an AI Energy System

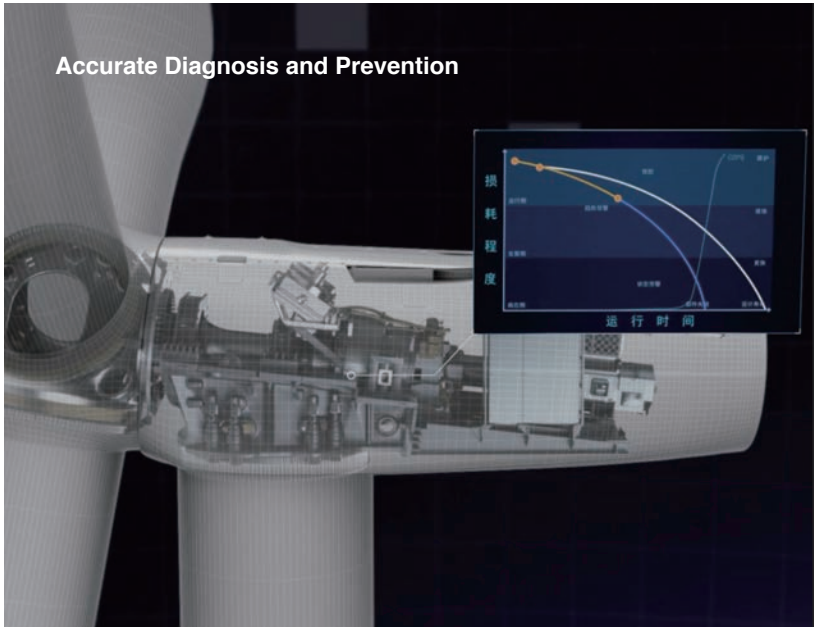

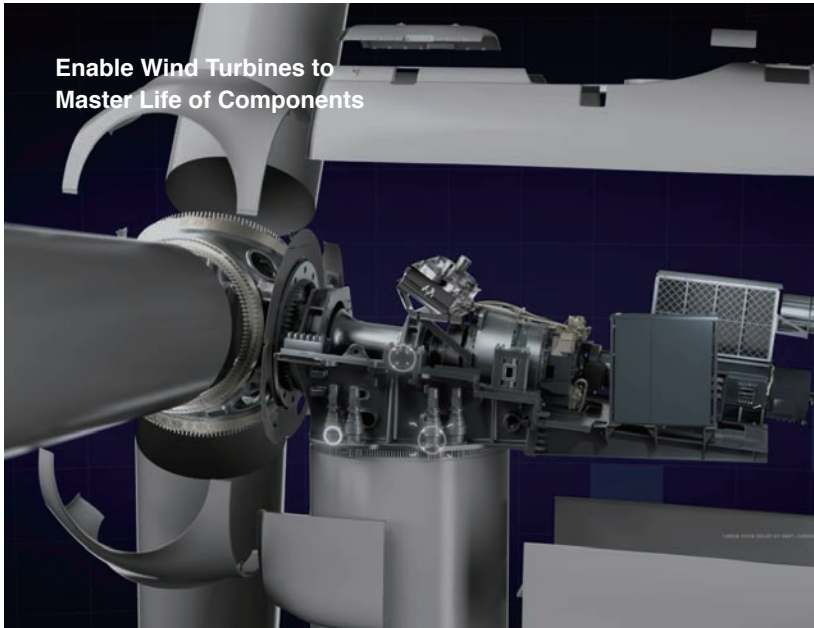

AI Turbine

Pioneering a New Generation of AI Wind Turbine

As a revolutionary productive force of our era, AI is not merely a “tool” but an “agent.” The future energy system will evolve into an ecosystem of “intelligent agents.” Beyond the traditional physical sensing systems, Envision’s AI wind turbine runs corresponding digital models powered by digital twin technology. Driven by sensor data, these models can effectively monitor the entire turbine’s operating status, shifting from warning to prevention—extending turbine lifespan and increasing revenue.

Digital Twin for Wind Farms

Digital twin coordinates wind turbine clusters in wind farms to deliver optimal farm-level collaboration, improving wind turbine performance through real-time response and risk aversion. In addition, inter-connected wind power generation and energy storage can better respond to energy dispatch and thus keep users invincible in power trading.

Envision's smart wind turbine
has a global footprint

Our total installed wind power capacity has exceeded 80 GW, ranking first globally in order volume and second in total installed capacity. We have also held 60% of overseas orders among Chinese wind turbine makers for three years.

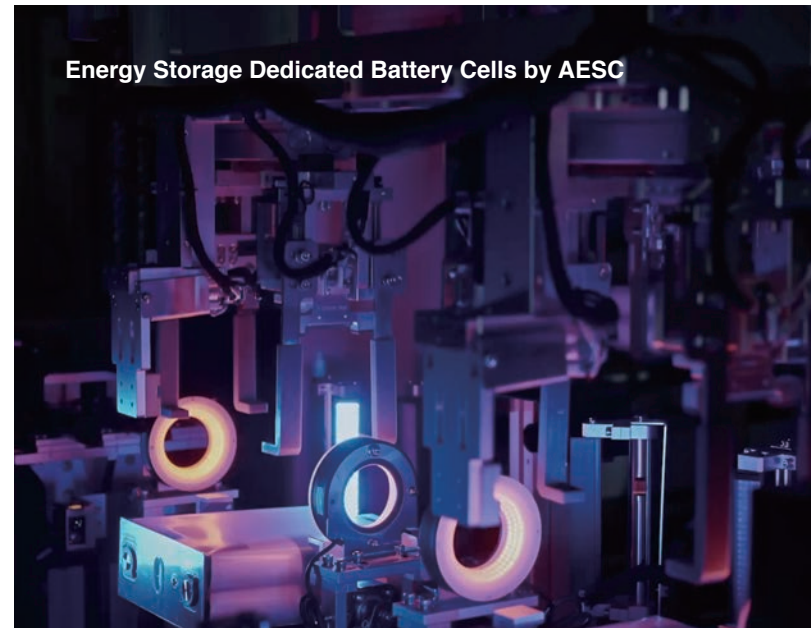

AI Energy Storage System

We Use Full-stack Technical Capabilities to Build Smart Energy Storage Systems

Envision persists in the development path of “full-stack technology capabilities”, comprehensively mastering the research and development, manufacturing of key technologies such as battery cells, BMS, PCS, EMS, SCADA, etc., and possesses the full industry chain capability from factory to energy storage power station, as well as the capability of full-lifecycle asset management.

EnOS Energy Storage Management Platform Integrates Production and Sales

EnOS energy storage management platform integrates AI big data modeling into energy storage, enabling it to be controlled and coordinated across cloud, station, and device ends in accordance with grid dispatch instructions, dynamic market transactions, weather changes, equipment operation data, production management plans, and other requirements.

It facilitates integrated production and sales, realizing optimization of trading strategies and closed-loop control. Additionally, it can be flexibly customized according to customer needs to meet various application scenarios.

Power-to-X is of
Strategic Significance to
the Transition from Fossil
Energy to New Energy

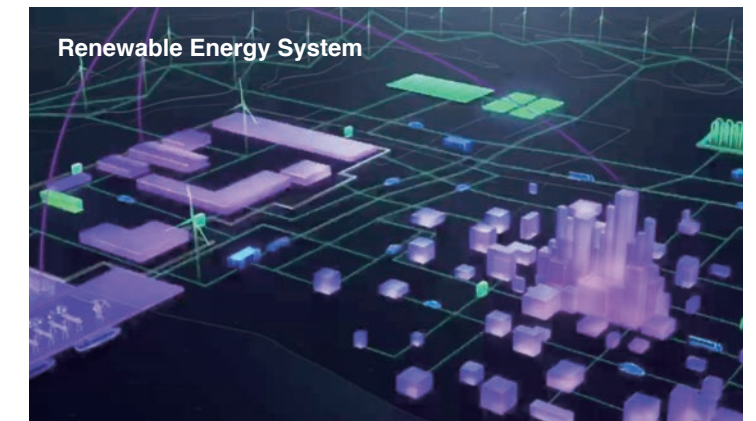

The "New Oil Revolution" Ignites at the Net Zero Industrial Park

Envision has set up the world's first operational net zero industrial park with green hydrogen & ammonia production as its core in Chifeng. As one of the biggest green ammonia plants worldwide, planned production scale is megaton per year. Envision is providing the best integrated value chain solution of green hydrogen through efficient energy utilization, flexible & safe system design, and economical solutions.

Envision has officially commissioned the world's largest and most advanced green hydrogen and ammonia production facility in Chifeng—delivering 320,000 tons of green ammonia annually.

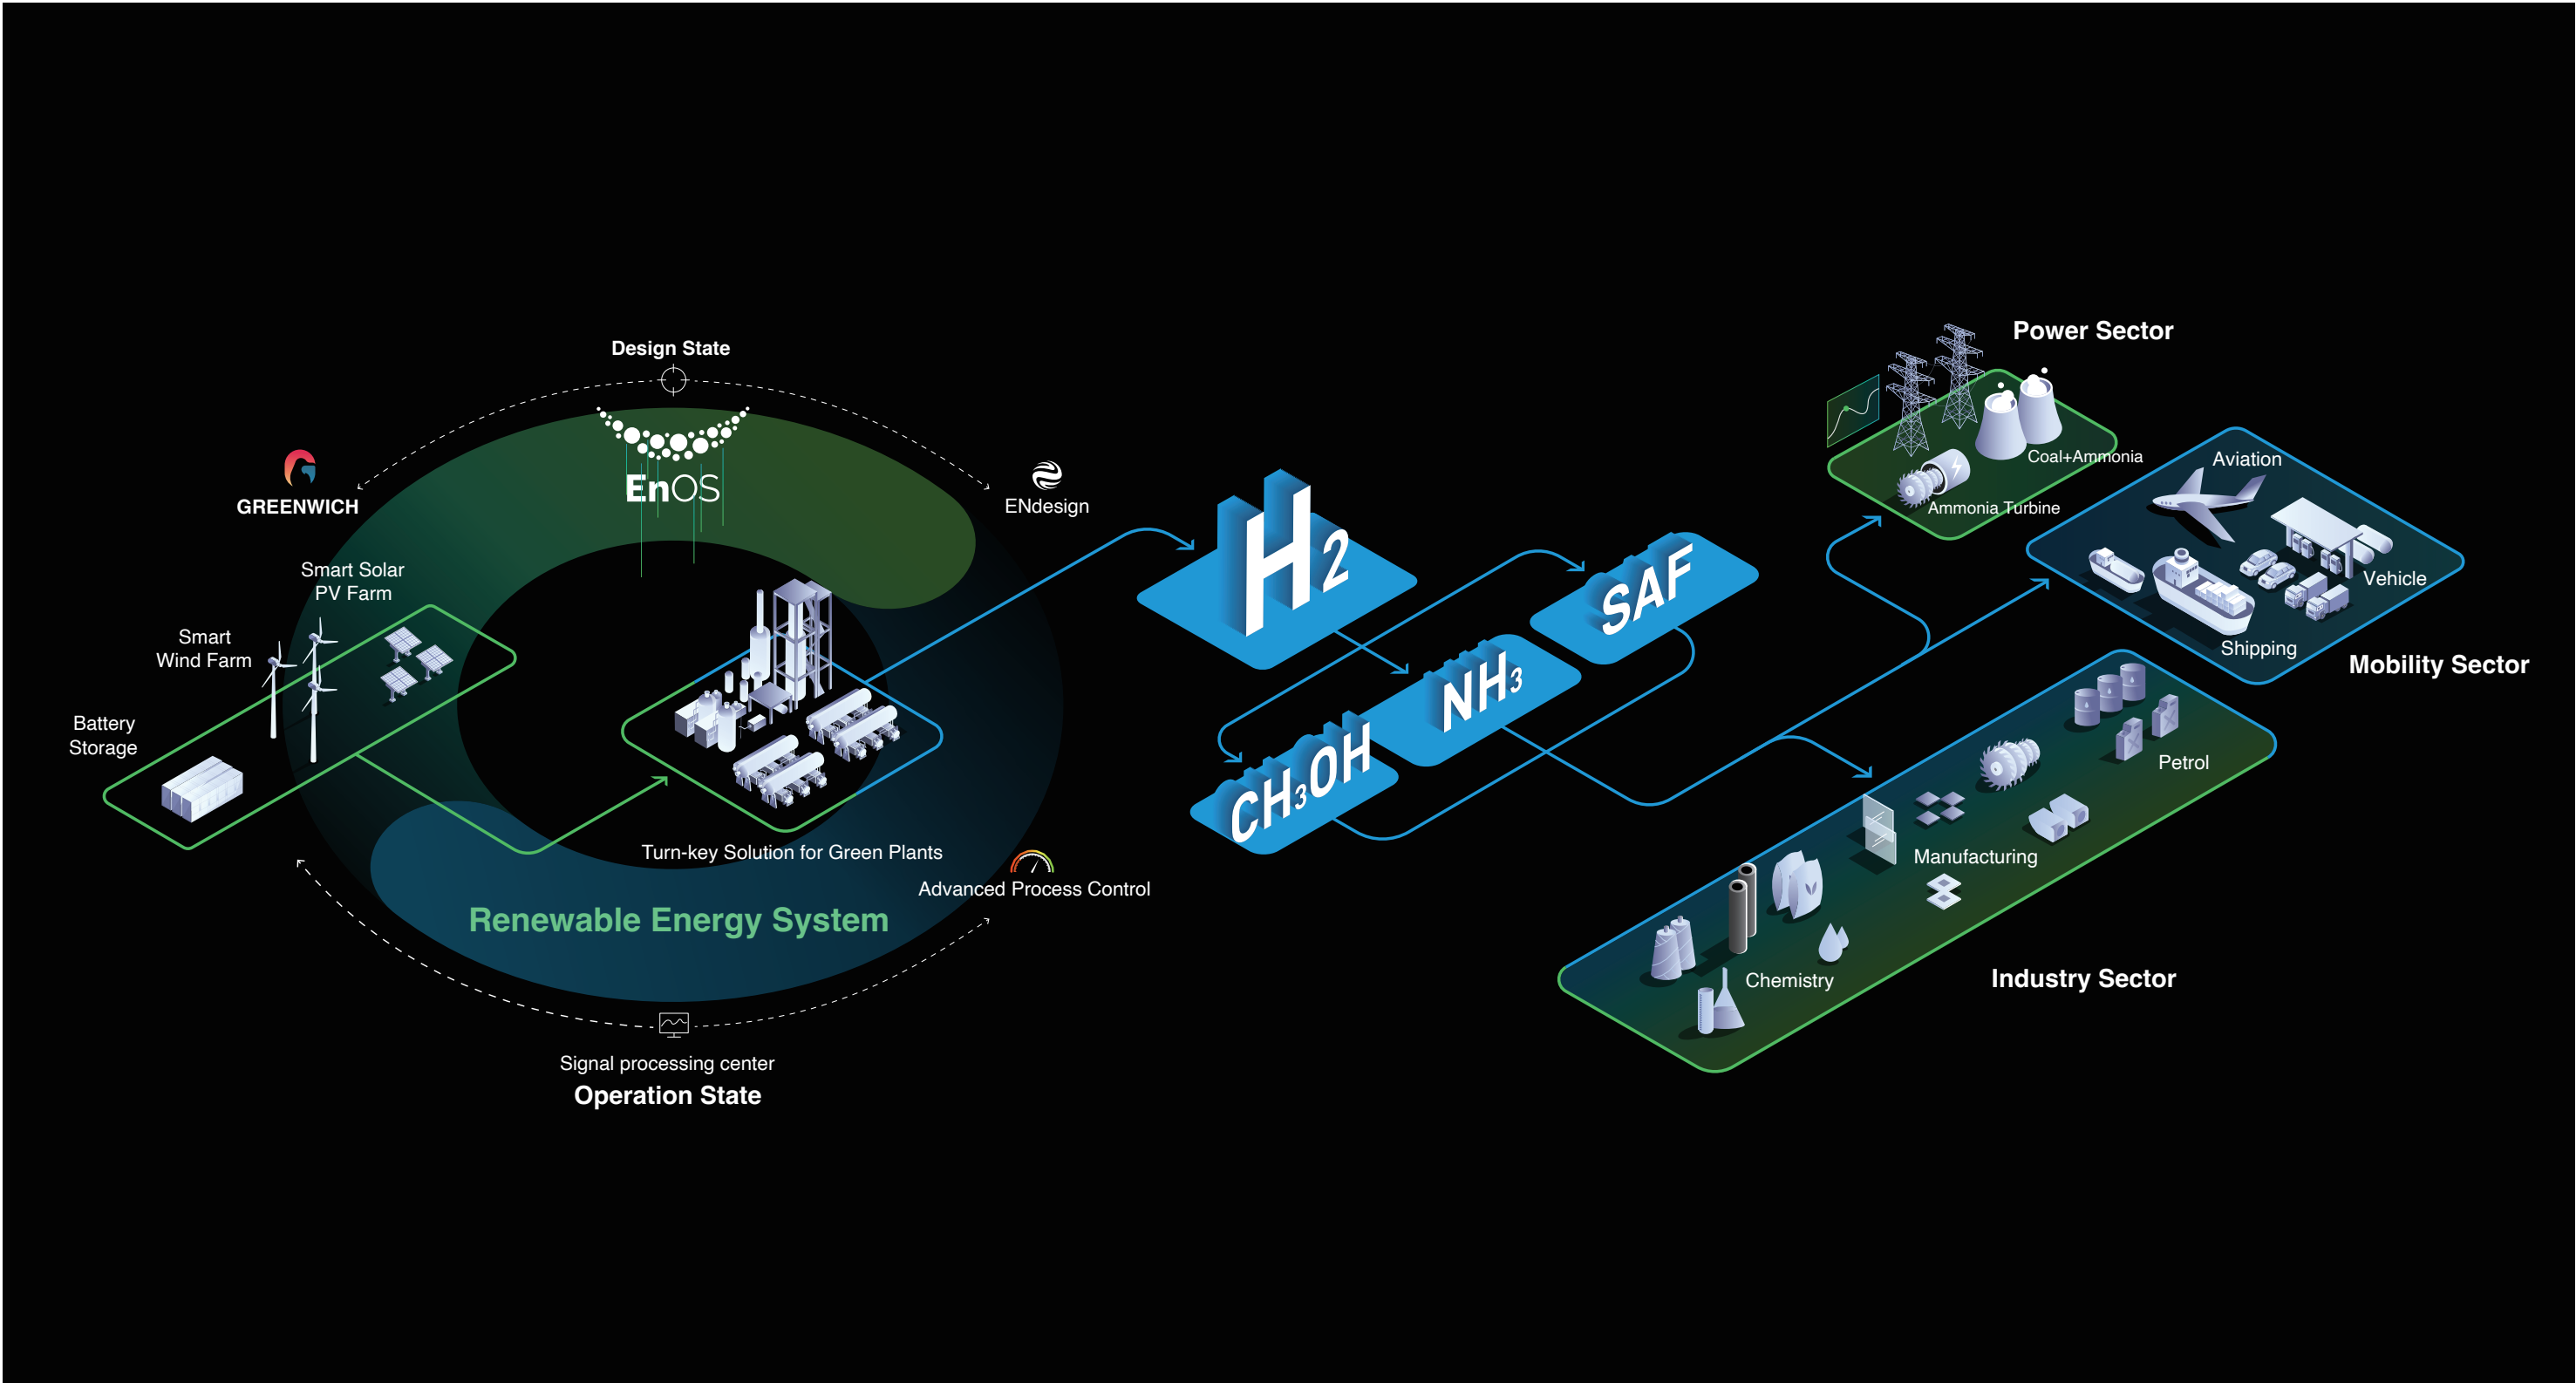

A World-leading Green Hydrogen Technology Company

Green hydrogen is a key accelerator for industrial decarbonization and low-cost renewable energy storage. Envision Energy is a world-leading green hydrogen producer and the only company that can provide integrated hydrogen value chain, including Renewable Energy System and hydrogen production equipment within Envision's net-zero industrial park.

Offering Customers a Complete Set of Net Zero Solutions Based on Green Hydrogen

We are developing advanced electrolyzers and air separation modules that built on our experience with renewables, energy storage, and digital solutions. Thus, our Power-to-X solution portfolio can provide green hydrogen production and dynamic green ammonia synthesis with rapid and wide-ranging response. As a leading green hydrogen technology provider and system integrator, we are able to help the most energy-intensive industries reduce their dependence on fossil fuels.

Net Zero Industrial Parks

Taking The Lead in Developing The Net Zero Industrial Park Model

Combining a renewable energy system, a net zero digital operating system, and a green industrial cluster, Net Zero Industrial Park not only solves the problem of green power consumption, promotes the upgrading of industrial chain and industrial system, but also is a powerful solution to enhance the green competitiveness of products.

Innovative Practices are Widely Recognized

Envision, in partnership with Ordos, developed the world's first net zero industrial park, which won the COP28 Energy Transition Changemaker Award. It became a featured case among the 2022 Business Cases for Climate Action at COP27 and has been included in the World Economic Forum's industry cluster transformation report for three consecutive years.

It was also used for case study for HBS's Global Climate Change MBA Class. Envision's climate-related technology innovation worldwide was discussed and warmly applauded in the class.

Envision Ventures

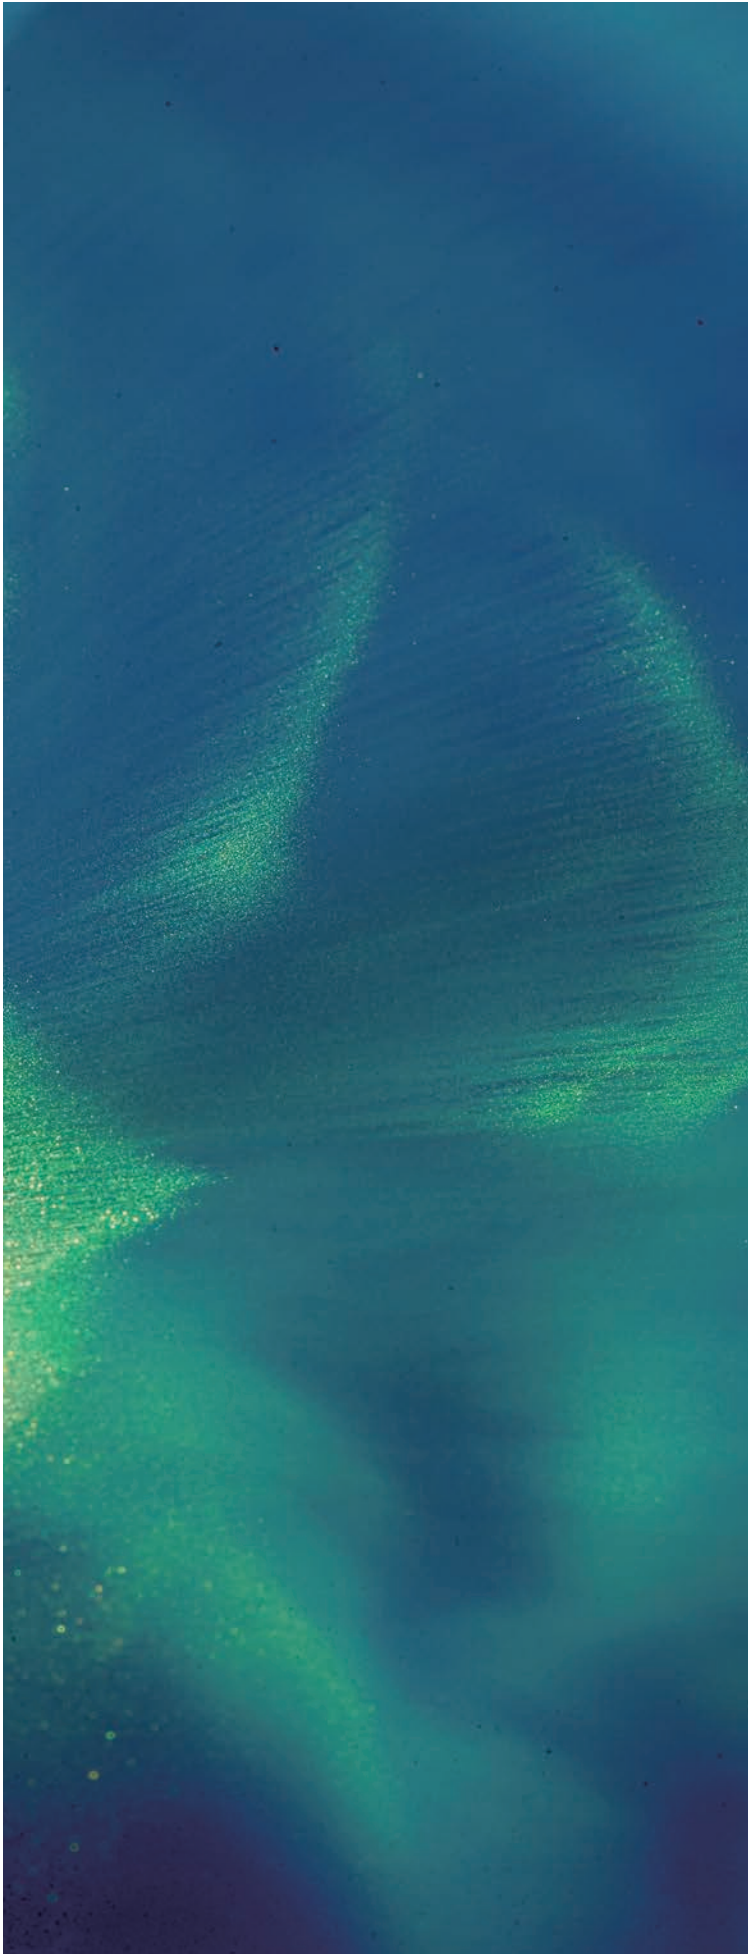

Envision Ventures invests in companies that share Envision's mission of solving the challenges for a sustainable future. We have invested in companies in the US, Europe, and China.

Over the past years, our venture capital arm has made financial inputs in such diverse fields as synthetic biology, logistics, hydrogen production, and power semiconductors. Helping companies achieve their net zero goals is etched in our DNA.

Envision-Hongshan Carbon Neutral Fund

Envision Ventures and Hongshan Capital jointly established Envision-Hongshan Carbon Neutral Fund in 2021.

Envision is using our expertise in tech in tandem with Hongshan Capital’s experience in investment to propel decarbonization and build a new carbon neutral tech ecosystem.

ChargePoint is one of the largest electric charging service company. To date, more than 172 million charging sessions have been delivered in North America and Europe, with drivers plugging into the ChargePoint network on average every second.

As an AI-powered leader in geospatial data analytics, Orbital Insight aims to provide institutions with more transparent and reliable data to help them make the best possible business and policymaking decisions.

Tomorrow.io, the world’s leading weather intelligence and climate adaptation platform. It has successfully launched the world's first commercially built satellites carrying a Ka-band weather radar, and the industry's first weather and climate generative AI.

Envision Racing Formula E Team

Envision Racing was crowned FIA Formula E World
Champion in 2023

TEAMS'
WORLD
CHAMPIONS
ENVISION
RACING

Race Against Climate Change™

Powered by Envision's net-zero technologies, Envision Racing was the first team in Formula E to be certified as carbon neutral and has maintained this status for seven consecutive seasons, making it “the greenest team on the greenest grid”.

In 2021, Envision Racing became the only sports team to officially partner with COP26 and presented its “Recover E” car made of plastic waste at the center stage of COP26, which became the focus of attention of world leaders.

In 2023, the team became the only sports team to exhibit and highlight the power of sport to world leaders within the UNFCCC’s “Blue Zone” at COP28. The team was exhibiting its Recover E 2.0 car made entirely of electronic waste to highlight global e-waste proliferation. In 2024, this Recover E 2.0, as one of only three exhibits, was on display at the 15th Annual Meeting of New Leaders of the World Economic Forum (Summer Davos).
